## PROFILE

Lead PHP Developer with over 15 years of experience in web application development, specializing in CMS platforms and e-commerce systems. Focused on building, extending, and maintaining scalable PHP-based solutions, with long-term responsibility for system stability, security, and technical direction.

## WORK EXPERIENCE

**PlumberMarketing** 2014 - PRESENT  
**Lead PHP / Full-Stack Developer**

### Development & Technical Responsibilities:

- Full-cycle development, deployment, and maintenance of custom web applications and business websites.
- Design and implementation of RESTful APIs and integration with third-party services.
- Long-term ownership, development, and customization of CMS platforms, primarily Joomla and WordPress.
- Creation of custom extensions, plugins, modules, and templates.
- Development of tools and integrations to support marketing and business processes.

### Web & Marketing Responsibilities:

- Design and develop websites, digital ads, and web applications.
- Plan and implement branding strategies and visual identities.
- Manage content publishing and website updates.
- Produce and edit short videos, write articles, select and edit images, curate high-quality visual content.

### Tech stack:

PHP, MySQL, JavaScript (Vanilla, jQuery, VUE), HTML, CSS/LESS, Photoshop, Affinity, Git (Bitbucket).  
Laravel, Symfony, Yii, Codeigniter, Joomla, Wordpress, etc

## WORK EXPERIENCE

### Presta

2013 - 2014

Senior PHP / Full-Stack Developer

- Led development and maintenance of PHP-based e-commerce platforms using PrestaShop and Magento
- Designed, developed, and maintained custom plugins and extensions for e-commerce systems
- Improved security, stability, and performance of CMS-based applications and custom components
- Expanded and maintained social management and content-related platforms
- Oversaw template architecture and frontend integration in collaboration with designers and developers

#### **Tech stack:**

PHP, MySQL, JavaScript (vanilla, jQuery), HTML, CSS, PrestaShop, Magento, Joomla, Wordpress, Codeigniter, etc

### Websolve (EngineRoom)

2010 - 2013

Senior PHP / Full-Stack Developer

- Developed and maintained e-commerce websites and online stores
- Implemented payment gateway integrations and custom payment processors
- Extended and customized an existing e-store system (features, checkout flow, admin tools)
- Built custom CMS/CRM modules to support business workflows
- Developed and adapted templates/themes
- Fixed bugs and improved stability and performance of e-commerce websites

#### **Tech stack:**

PHP, MySQL, JavaScript (Vanilla, jQuery), HTML, CSS, SVN, Opencart, custom CMS system

## WORK EXPERIENCE

### Freelancer.com

2010 - 2013

Junior PHP/Web Developer

- Worked as a self-employed developer, delivering multiple client projects end-to-end.
- Built and customized WordPress and Joomla sites (themes, extensions, and content-driven pages).
- Developed custom PHP websites primarily with CodeIgniter, including admin panels and bespoke features.
- Produced pixel-perfect PSD-to-web implementations and maintained high UI/UX attention to detail.
- Implemented custom plugins/components/modules and small third-party integrations as required.

#### **Tech stack:**

PHP, MySQL, JavaScript (vanilla, MooTools), HTML, CSS, Joomla, Wordpress, Codeigniter, etc

### **PCI (Metier Resources)**

2009 - 2010

Junior PHP/Web Developer

- Developed and maintained a California casino review website.
- Built custom Joomla! modules and tailored the site template.
- Handled day-to-day updates, fixes, and content/support tasks.
- Produced pixel-perfect PSD-to-web conversions as needed.

#### **Tech stack:**

PHP, MySQL, JavaScript (vanilla, MooTools), HTML, CSS, Joomla

## PROJECTS

### Mefi's Asset Tools

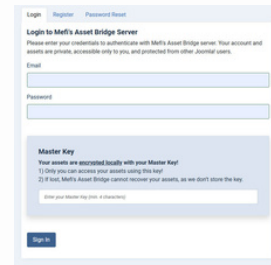

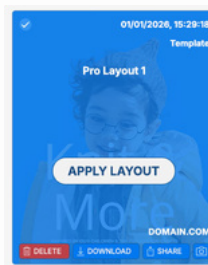

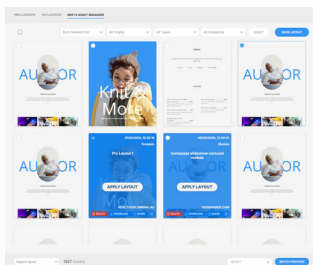

2025 - PRESENT

**Self-initiated** personal project extending Yootheme/Joomla with a secure, centralized asset management system and dynamic previews.

I designed the concept, architecture, and technology stack, and implemented the solution end-to-end.

The system is designed to securely identify clients and protect API access using cryptographic signatures and short-lived authentication tokens. The project is currently in active development, with [source code publicly available](#).

- Backend built with **SlimPHP**, exposing secured **REST APIs**.
- Joomla-installable extension integrating with Yootheme **without official hooks or extension points**.
- Client identification and request signing using RSA key pairs and environment fingerprinting.
- JWT-based authentication with short-lived sessions and protected API endpoints.
- Frontend application built with **Vue 3** using the **Composition API** and composables.
- Internal communication implemented via registry pattern and event bus.

## Tech stack & Architecture

Backend:

- PHP / MySQL
- SlimPHP
- REST APIs
- JWT Authentication
- RSA cryptography

Frontend:

- Vue 3
- Composition API
- JavaScript (ES6+)
- Event Bus
- Registry Pattern
- Client-side encryption

## PROJECTS

### Screenshot Collab - Chrome Extension

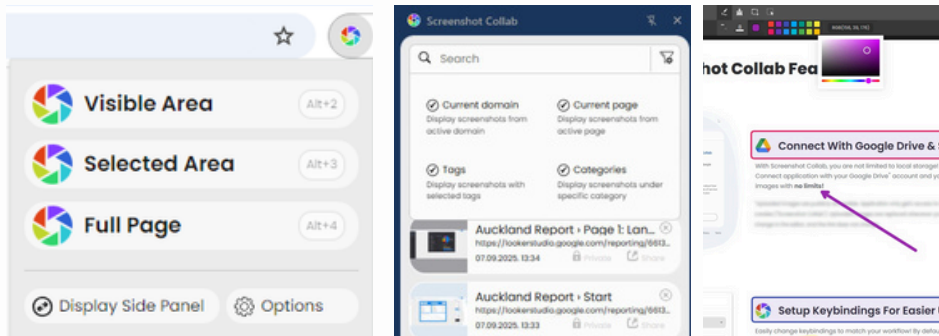

2024 - 2025

Self-initiated personal project | [screenshotcollab.com](https://screenshotcollab.com)

A feature-rich Chrome extension that enables users to capture, annotate, and share full-page screenshots with local-first storage and optional **Google Drive integration**.

I designed and developed **end-to-end**, from concept and architecture through implementation and deployment.

- Multiple screenshot capture modes: visible area, full page, and custom selection
- **Comprehensive annotation** toolkit with drawing, shapes, blur, highlight, crop, and text tools
- Local-first storage strategy with **Google Drive** cloud sharing
- Screenshot history management with search and filtering capabilities
- Configurable **keyboard shortcuts** for streamlined workflow
- Light and dark theme support

### Tech stack & Architecture

- **Vanilla JavaScript (ES6+)** - OOP, modular class-based architecture
- **Webpack 5** - Module bundling, code splitting, and build optimization
- **Chrome Extension APIs** - Service workers, content scripts, messaging, storage, identity (OAuth2), side panel
- **SCSS/Sass** - Component-based styling with theme system
- **Event-Driven Architecture** - Decoupled component communication
- **Dispatcher Pattern** - Specialized dispatchers for content, editor, popup, sidepanel, and service worker contexts
- **Task Handler Chain** - Modular task processing with specialized handlers for different operations
- **Factory Pattern** - Storage & Theme factory loading
- **Tool-Action System** - Reusable components

## PROJECTS

 Cloud Bookmarks™

### Cloud Bookmarks™ - Chrome New Tab Extension 2020 - 2021

I have entirely created this, production-ready Chrome extension that replaced the default new tab page with a visual bookmark manager featuring cloud synchronization capabilities.

- **Visual Bookmark Management:** Interactive grid-based interface with auto-generated thumbnails from website favicons and logos
- **Custom Folder Organization:** User-created folders with customizable images, colors, and background types
- **Cloud Synchronization:** Real-time backup and restoration via centralized server with OAuth authentication
- **Advanced Customization:** Themeable UI with configurable options
- **Smart Organization, Search & Filtering**
- **Bidirectional sync with native Chrome bookmark system**

### Tech stack & Architecture

- **Vanilla JavaScript (ES6+)** - modular architecture pattern
- **jQuery & jQuery UI** - DOM manipulation and drag-and-drop
- **Bootstrap 4** - responsive grid system and UI components
- **RESTful API** communication with cloud server ([cloud-bookmarks.com](https://cloud-bookmarks.com))
- **Modular** - dependency injection system
- **Event-driven architecture with custom hooks system**
- **Observer pattern** - state management
- **Factory pattern** - default object creation

### Cloud Bookmarks™ - Laravel RESTful API Server

Built production-ready **Laravel backend providing secure cloud synchronization** for the extension. Implemented OAuth 2.0 authentication with Laravel Passport, multi-tier subscription system with role-based permissions (Spatie), custom rate-limiting middleware for backup quotas, and comprehensive access tracking. Features include versioned RESTful API, automated token lifecycle management, tiered storage limits (1MB-10MB+), and secure data validation with handshake verification.

**Tech Stack:** Laravel 6.x, Laravel Passport (OAuth 2.0), MySQL, Spatie Permissions, Custom Middleware, RESTful API Design
